

HTX Deposit system

The deposit system HTX has the purpose to collect wires of different types and lengths that have been processed by cutting and stripping machines, in order to facilitate their gripping by the operator.

Different systems of slots allow the adaptability and the use on all types of wire cutting and stripping machines positioned on various worktops.

It's guaranteed a perfect storage of cables of unipolar, multipolar and flat cables of different size, up to a length of about 3,5 meters.

HTX is in CE conformity.
