Cable Treatment

UNROAL

UNWIDER FOR WIRES ON COILS ø 600÷1000mm

UNROAL has been created to solve unwinding problems of wires on coils with diameter from 600 to 1000 mm with automatic or manual towing process.

It's an indispensable tool for those firms producing electric cables and for companies supplying their customers with big stocks of cables.

Standard equipment is provided with a damper to absorb the initial starting push of the automatic machines.

Optionally UNROAL can be equipped with a counter to help the operator in cutting to length wires.

In case of use with systems for automatic traction it's instead necessary the presence of protective barriers in order to prevent any possible contact with the swing arm while in action..

UNROAL is in CE conformity.
