Inspex HD

The Inspex HD is a high definition camera inspection system offering incredible image quality and magnification with superb colour reproduction, contrast and resolution. It is extremely versatile due to its VESA mount compatibility and multiple configurations which can be adapted to suit any industry or environment. The large working area and height adjustment makes it ideal for rework and repair. The system is portable due to its ultra light weight and compact design. The ergonomic design allows the user to sit or stand in a comfortable and safe posture thus providing relief from back, neck and eye strain typically associated with traditional microscopes. The Inspex HD allows more than one person to view the same object image simultaneously allowing training and discussions on quality assurance and failure diagnosis.
